Ethics for Engineers

Engineering is one of the most important jobs in society. Engineers build, design and develop structures and processes in order to make society better. This requires engineers to reflect constantly on the products and processes that they make, to ensure they are being socially and professionally responsible. Engineers who work for municipalities have an added layer of responsibility – not only do they have to abide by the Engineering Code of Ethics, but they must also make sure they know of and adhere to by the ethical laws and regulations applicable to all government employees. The goal of this presentation is to clearly explain the ethical expectations for engineers as a whole, and the additional ethical requirements that apply to engineers who work for a government entity.

All are welcome to attend.

This workshop is presented as
part of the

Track**

Emily Truman

City Attorney
The City of Baraboo

Emily Truman was born and raised in Madison, WI. After graduating cum laude with a BA in psychology from University of Wisconsin – Madison, Emily moved to New York City where she earned a JD from Rutgers Law School – Newark.

After a one year judicial clerkship and seven years working as an Assistant Corporation Counsel for the City of Newark, NJ, Emily returned to Wisconsin, where she spent two years working as an Assistant City Attorney for the City of Appleton before becoming the City Attorney for the City of Baraboo.

As City Attorney, Emily attends to the legal business of the City of Baraboo in a wide array of practice areas including litigation, employment, contracts, real estate/land use, municipal prosecution and more.
